

Guidelines for Project Management

Gilles Venturini, PolytechTours Computer Science dpt, 2025/2026

1°) Use a tool to share documents about the project.

Documents can be documentations, papers, reports, draft, ppt, etc:

- Local: utbox.univ-tours.fr (any docs, with possibility of editing), or utmedia.univ-tours.fr (videos, etc)
- General: sharepoint (Teams), Google docs, ...

2°) Use a tool to share project analysis and development:

- General: Trello. One board/table can be created with different “columns”:
 - A Kanban (To do, Doing, Done) for software development,
 - A second Kanban for project management
 - Share the Trello with me

3°) Use a tool to share code or data (especially for AI projects):

- Local gitlab: scm.univ-tours.fr I will create the project and I will be the owner (for saving the project beyond your period of work)

4°) Communication (with me)

- Use preferably your @etu.univ-tours.fr email to contact me (not the personal email)
- Avoid instant messaging on Teams unless I'm online at that moment
- Every two weeks (at least) give some new to your supervisor

5°) Meetings (with me)

- Send an email to arrange a schedule
- Plan a meeting every week if needed
- For each meeting, prepare a simple/draft-like powerpoint presentation, showing the achievements of the week, the work to come for the current week, any questions you might have, etc
